

## Homework 5

Instructor: Bin Hu

Due date: November 15, 2018

**1**

(a) Consider the constrained minimization problem:

$$\begin{aligned} & \text{minimize} && x_1^2 + x_2^2 + x_3^2 + x_4^2 + x_5^2 \\ & \text{subject to} && x_1 + x_2 + x_3 + x_4 + x_5 = 5. \end{aligned}$$

Determine all the local mins for the above problem.

(b) Consider minimizing the function  $f(x) = \frac{1}{2}\|x\|^2 + \frac{1}{2}(a^\top x - b)^2$  where  $a \in \mathbb{R}^p$ ,  $b \in \mathbb{R}$ , and  $x \in \mathbb{R}^p$ . This problem can be rewritten as

$$\begin{aligned} & \text{minimize} && \frac{1}{2}\|x\|^2 + \|y - b\|^2 \\ & \text{subject to} && a^\top x = y \end{aligned}$$

Write out the Lagrangian  $L(x, y, \lambda)$  for the above problem and calculate the related dual function  $D(\lambda) = \min_{x, y} L(x, y, \lambda)$ .

**2.** (a) Consider the basis pursuit problem

$$\begin{aligned} & \text{minimize} && \|x\|_1 \\ & \text{subject to} && Ax = b \end{aligned}$$

This problem can be rewritten as the following form:

$$\begin{aligned} & \text{minimize} && f(x) + g(y) \\ & \text{subject to} && x - y = 0 \end{aligned} \tag{1}$$

where  $f(x)$  is an indicator function of the set  $\{x : Ax = b\}$ , and  $g(y) = \|y\|_1$ . Recall the indicator function satisfies  $f(x) = 0$  if  $Ax = b$  and  $f(x) = \infty$  if  $Ax \neq b$ . The augmented Lagrangian function is given as

$$L_\rho(x, y, \lambda) = f(x) + g(y) + \lambda^\top (x - y) + \frac{\rho}{2}\|x - y\|^2 \tag{2}$$

Your task is to write out the ADMM update formula for (1) using the projection operator onto the set  $\{x : Ax = b\}$  and the shrinkage operator. Specifically, write out  $x_{k+1}$ ,  $y_{k+1}$ ,

and  $\lambda_{k+1}$  as functions of  $x_k$ ,  $y_k$ , and  $\lambda_k$ . Simplify the arg min operation using the projection operator and the shrinkage operator.

(b) Consider the following least square problem  $\min_x \sum_{i=1}^n \frac{1}{2}(a_i^\top x - b_i)^2$  where  $a_i \in \mathbb{R}^p$ ,  $b_i \in \mathbb{R}$ , and  $x \in \mathbb{R}^p$ . This problem can be rewritten as

$$\begin{aligned} & \text{minimize} && \sum_{i=1}^n f_i(x^i) \\ & \text{subject to} && x^i - y = 0, \forall i \in \{1, 2, \dots, n\} \end{aligned}$$

where  $f_i(x^i) = \frac{1}{2}(a_i^\top x^i - b_i)^2$ , and  $x_i \in \mathbb{R}^p$  is a vector having the same dimension as  $a_i$ . The augmented Lagrangian is given by

$$L_\rho = \sum_{i=1}^n \left\{ f_i(x^i) + (\lambda^i)^\top (x^i - y) + \frac{\rho}{2} \|x^i - y\|^2 \right\}$$

Your task is to write out the ADMM update formula for the above problem. Specifically, express  $x_{k+1}^i$ ,  $y_{k+1}$ , and  $\lambda_{k+1}^i$  as functions of  $x_k^i$ ,  $y_k$ ,  $\lambda_k^i$ ,  $a_i$  and  $b_i$ .
